

Mia Paulson, Carter Albers, Cooper Jones

Overall Description

Cocktail-Making App

- Purpose: Having fun cocktails be easily accessible and fun (instead of stressful) to make
- Inspiration: Found an API that we can use to pull the information from
- Audience: People who are looking to spruce up their drinking and are tired of fireball shots
-

Wireframe that shows the design and flow of your team's project. This could be anywhere from hand drawn sequence of images to a low-fidelity mockup in a UX design tool of choice.

Information/sources planning to draw upon

API for cocktails: <https://www.thecocktaildb.com/>

Team Member Contributions

Each of us are expecting to do 33.33% of the project, we don't really have specific roles in mind (yet).

Goals

- Prototyping/proof of concept (milestone 2)
 - "Thinking in React" process done and completed
 - Static page

- MVP (Minimum Viable Product) (milestone 3)
 - Have directions accessible for making the drinks
 - Stumped on what drink to make? Get a random drink to try
 - Filter based on alcohol you have at home
 - Search for specific drinks
- Stretch goals (nice-to-haves, but okay if they aren't there by critique day)
 - Combine all drinks' ingredients into grocery list
 - Putting in ingredients you have and seeing what drinks to make
 - Favorites list for the drinks you've liked/dislike ones too
